

See more with the thermal imager **testo 880**

SEE MORE...

Infrared radiation cannot be perceived by the human eye. However, all objects whose temperature is above the absolute zero point of approximately -273 degrees centigrade, emit infrared radiation.

Thermal imagers can convert infrared radiation into electric signals, and thus present them visually. With the excellent image quality of the testo 880, even the smallest temperature differences can be seen. With it, Testo is committing to the future.

Exchangeable lenses ensure that the correct image section is always visible, highly flexibly and depending on the requirements. The additionally integrated digital camera considerably facilitates documentation.

The presentation of surface humidity, using dynamic humidity measurement and calculation of the parameters, for fast localization of mould risk spots, is unique in building thermography.

...OFFER MORE.

Mobile thermal imagers scan equipment or buildings, and transform infrared radiation into visible thermal images with which a qualitative and quantitive analysis of temperature can be conducted. esto

The use of portable infrared measuring instruments offers great potential for assistance in many areas. Thermal imagers are of great significance in preventive service and maintenance, but also in building and production monitoring, as well as in technical diagnostics. A thermal imager detects anomalies, thus making the search for errors and the early implementation of correctional measures possible. It checks materials and components completely without any damage and exposes problem zones before a malfunction can occur. While other methods require production to be halted, or pipe systems to be dismantled, with the testo 880 a single glance is sufficient.

In many cases – whether in trade or in industrial surroundings – the use of thermography offers possibilities for improving quality, securing process and acheiving new performance.

Building shell

In building thermography, infrared technology is ideal for the fast and effective analysis of energy losses in the heating or air conditioning of buildings.

Thanks to its very high temperature resolution, less than 0.1 °C, the thermal imager testo 880 visualizes in detail defective insulation, thermal bridges, building defects and damage.

Building thermography

Underfloor heating

In installations too, such as the localization of leakages in underfloor heating or other inaccessible pipe systems, the testo 880 provides support in detecting causes. The onehand operation, with motor focus and 5-way joystick, offers a fast and exact limitation of possible damage, and targeted maintenance.

Mould growth

The testo 880, the only thermal imager equipped with a wireless probe for real-time humidity measurement, delivers data with which dangerous, allergenic mould growth can be prevented, or the risk of mould contamination minimized, even in the corners and niches of a house.

Electrical maintenance

In low, medium and high voltage systems, infrared thermography allows an evaluation of the level of warming. This enables defective components or connections to be identified early and the required preventive steps taken, thus minimizing the danger of fire and helping to avoid costly downtimes.

Documentation plays an important part in preventive maintenance. The testo 880 offers integrated measurement site management for the structuring of inspection routes. In addition to the infrared image, a real image of the measurement site can be recorded with the integrated digital camera. The power LEDs illuminate dark areas. The allocation of the real image to the infrared image is carried out by the software. The PC software with report creation links the image data automatically and allows fast, clear and easy documentation of the inspections.

Industrial thermography

Production monitoring and R & D

In the areas of process monitoring, quality assurance of the product, or research and development, the use of a thermal imager is, in many cases, the prerequisite for more security and precise situation analyses. In addition to foreign bodies, anomalies in the heat distribution of components in production processes can thus also be detected quickly and without contact. When checking electrical assemblies, e.g. on circuit boards, the very short minimum focus distance of 10 cm helps to detect overheated components exactly.

Mechanical maintenance

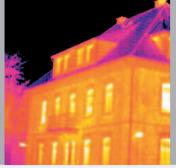

Infrared measurements also offer multiple possibilities for use in industrial preventive maintenence.

A reliable early recognition of developing damage to process-relevant system components is important in order to guarantee high security and reliability of the machines. Heat development, especially in mechanical components can indicate strain caused by friction, incorrect adjustment, excessive tolerances of the components or insufficient lubrication. With its high temperature resolution, the testo 880 provides an exact diagnosis.

۲

Perfect results thanks to exact and reliable inspection

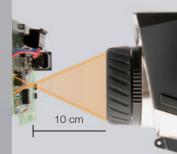

Superlative image quality ensures reliable diagnoses, even for the smallest temperature differences

Integrated digital camera with power LEDs for the optimum illumination of dark areas

Dynamic motor focus for one-hand operation

Very short mimimum focus distance of approx. 10 cm for small objects

testo 880 – leading edge technology in a new price dimension

With a thermal resolution < 0.1 °C, perfectly developed electronics for the optimum utilization of the detector, and the image interpolation to 320 x 240 pixels, the testo 880 delivers high definition images which satisfy even the most demanding user. A wide angle and a telephoto lens enable adaptation to the different sizes and distances of measurement objects. The optimum exploitation of the IR radiation is guaranteed by the high-quality germanium optics.

testo 880, with an integrated digital camera and image-in-image function, links real and IR images for fast, safe and easy documentation. An exchangeable protective glass prevents damage to the valuable optics.

The easy creation of file structures reduces to a minimum the administrative effort for the planning and management of the images, measurement sites and tours.

Integrated digital camera

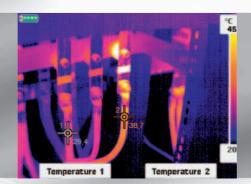

Power LEDs

High-quality F1 lens with exchangeable IR protective glass

Easy analysis

Image-in-image function for easier orientation and simple documentation

Integrated report creation makes documentation faster and more secure

Real time humidity measurement by wireless probe

2

Versatile and user-friendly

With exchangeable lens for highest versatility under different application conditions

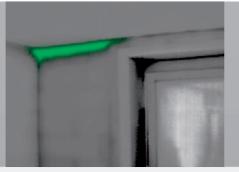

The IR protective glass protects the lens from dust and scratches

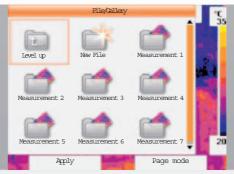

Freely programmable fast selection buttons

Easy joystick operation for navigating through menu and image gallery

Presentation of surface moisture for detecting mould risk spots

Measurement site management for creating inspection plans

12-511

testo 880-1

The starter instrument for fast fault-finding and quality assurance

- \cdot High-quality wide angle lens 32° x 24° with F1 optics
- · Image refresh rate 9 Hz
- Detector 160 x 120
- NETD < 0.1°C
- · Manual focus
- · Minimum focus distance 10 cm

Data storage device SD, 1 GB for approx. 800-1000 images

Included in delivery

- · IR software with integrated report creation
- \cdot USB cable
- · Li-ion battery
- \cdot High-quality, robust case

testo 880-2

The professional thermal imager with extensive analysis functions, extendable by telephoto lens

Additional functions to testo 880-1:

- Exchangeable lenses
- · Display of surface moisture distribution
- · 33 Hz version*
- · Lens protection glass included

testo 880-3

The expert's thermal imager for the complete analysis and real image documentation of buildings, electrical systems and machines.

Additional functions to testo 880-2:

- \cdot Built-in digital camera with power LEDs
- · Dynamic motor focus
- Real-time display of surface moisture distribution with wireless humidity probe (optional)

testo 880-1

Part no. 0563 0880 V1

testo 880-2

Part no. 0563 0880 V2

testo 880-3

Part no. 0563 0880 V3

testo 880-3 Pro-Set

The expert's thermal imager with unbeatable price advantage

Additionally to the delivery scope of testo 880-3, the set contains:

- \cdot One telephoto lens
- \cdot One addition battery
- One fast charger
 The sunshield
